About the conference

Our Networks is a conference about the past, present, and future of building our own network infrastructures. The event brings together enthusiasts, hardware and software hackers, researchers, organizers and more to collectively explore creative and critical engagements with the Internet and alternative infrastructures.

In the presence of so many unknowns, how can alternative network infrastructures support the creation of radically equitable futures? What tactics of distributed collective care allow us to offer mutual aid in this moment? How can we apply more broadly what we learn as we go about decentralizing the conference across time and place?
